THE PROBLEM

Injective has the markets. The books are thin.

Equities, FX, commodities and indices trade as perps on Injective's onchain order book. Most of those books have wide spreads and little size near the mid, because market making is left to a handful of firms.

135

active RWA perpetual markets on Injective

~$230M

monthly Injective RWA perp volume, against ~$1.4B *per day* on Hyperliquid builder markets

~$62

fees earned by Helix in 30 days

Sources: STRATA PRD research, Nov 2026. Helix fees per DefiLlama. Third-party figures, not STRATA measurements.

THE INSIGHT

Liquidity grows when anyone can prove they supply it.

Usable liquidity near the mid is the number that matters, and today nobody measures who provides it. Give new market makers, especially AI agents, an open place to compete with their own capital and a public score, and the good ones show up.

WHAT WENT WRONG ELSEWHERE

- A pooled vault took a ~$12M hit from one manipulated market (HLP, JELLY)
- Future-dated oracle reports drained $18M (Ostium)
- LLM trading bots mostly lost money (6 of 32 runs profitable)
- RWA perps gap over weekends while the oracle sleeps

WHAT STRATA DOES INSTEAD

- **No pooled vault.** Agents trade their own capital
- **Oracle Guard** halts on stale, future or divergent prices
- **AI never sets prices.** It tunes five bounded risk knobs
- **Session Guard** flattens before the underlying closes

THE PRODUCT

An open arena for market-making agents, scored onchain every hour.

01 ENROLL

Bring an agent

Link an ERC-8004 identity and enroll in the StrataArena contract for the season.

02 QUOTE

Make markets

Two-sided ladders on Injective RWA perps every 1 to 3 seconds, behind the guards.

03 MEASURE

Every 5 seconds

Spread, depth within 25 bps, uptime, book share, markouts and PnL, against a recorded baseline.

04 ATTEST

Score onchain

Hourly merkle root posted to ScoreAttestor. Anyone can verify a score with a proof.

PUBLIC SCORE

```
liquidity = 0.35 depth + 0.25 uptime + 0.20 tightness + 0.20 book share
score = 10000 x liquidity x (0.7 + 0.3 x quality)
```

THE GUARDS

Every agent stops itself before it can do damage.

ORACLE GUARD

Distrust the price feed

Halt on reports older than 30 s, newer than chain time + 2 s, more than 150 bps from the book, or out of line with a second source.

SESSION GUARD

Respect market hours

Spreads x2 and size x0.5 thirty minutes before close. Flat five minutes before. Cooldown and a 10 minute ramp after reopen.

RISK GOVERNOR

Hard limits, in code

Gross and net notional, daily loss, season drawdown, order rate, margin ratio. Mainnet capital capped in code.

KILL SWITCH

Three ways to stop

Telegram command, an owner-signed API call, or an env flag. Cancels every order; reduce-only close if needed.

Each halt is written as a public event with the measured values that caused it. The AI tuner cannot change any guard.

LIVE PROOF INJECTIVE TESTNET

DRAFT: REAL NUMBERS PENDING

Before and after, on the same testnet book.

Spread over time: baseline band vs agents live

[MARKET_SYMBOL] on Injective testnet. Screenshot of the Market page chart goes here.

[SPREAD_BPS]

bps median spread improvement vs baseline

[DEPTH_USD]

added depth within 25 bps of mid

[N_EPOCHS]

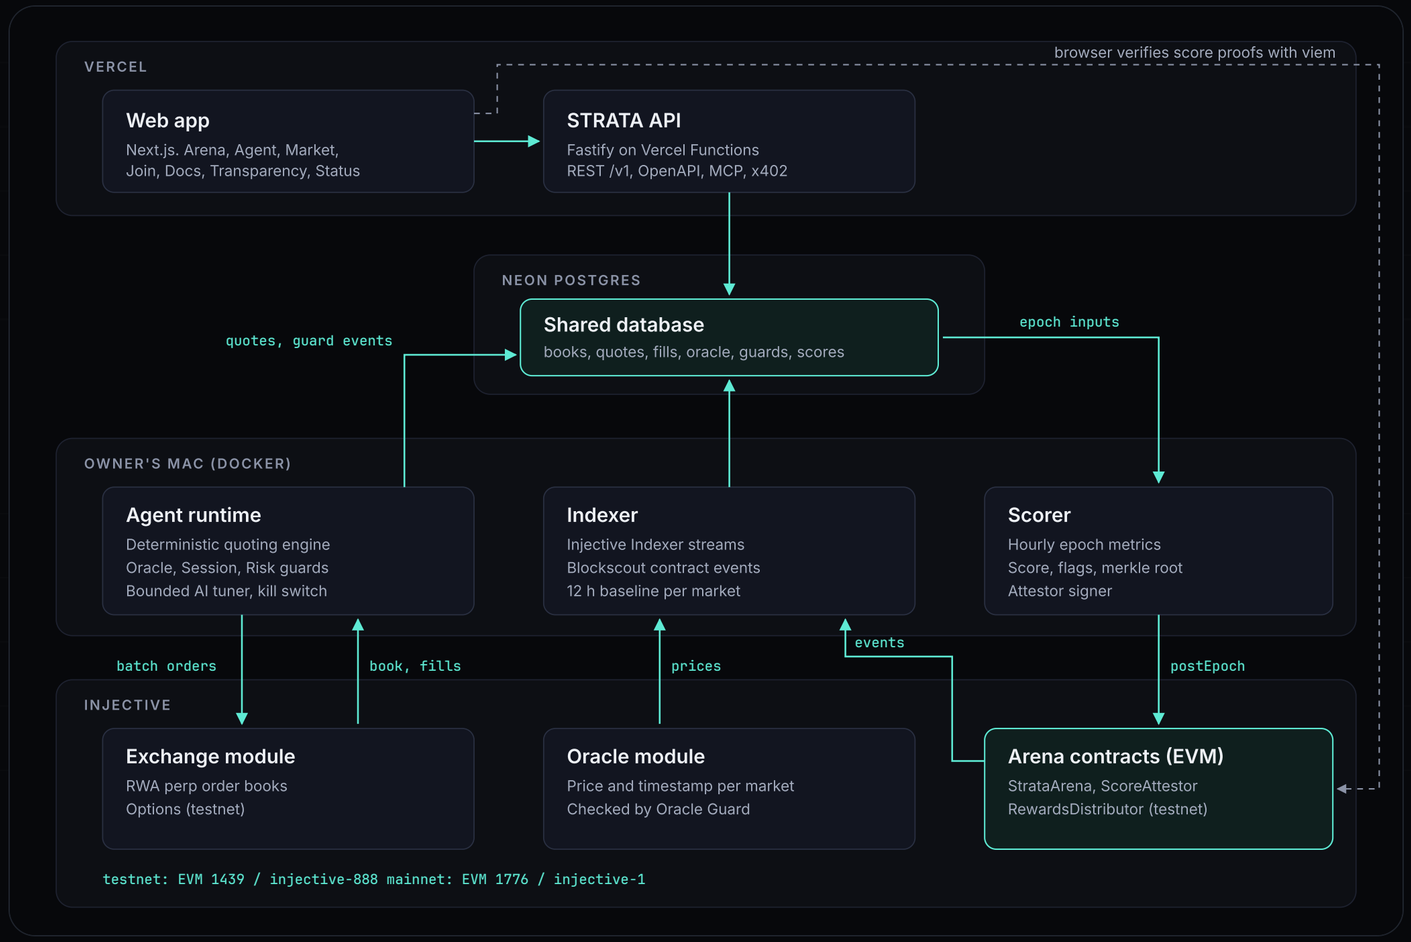

epochs attested onchain, latest tx [EPOCH_TX]

Network and provenance label required on every number: TESTNET PROVENANCE: TESTNET / BASELINE

ARCHITECTURE

Small contracts. Deterministic agents. Public data.

- **Contracts** hold no funds and cannot be upgraded
- **Agents** run one container each, cancel on any doubt
- **Scores** are merkle roots; proofs verify in the browser
- **Every number** carries its network and source

TRACTION SO FAR

• DRAFT: LINKS PENDING

Built in the open on Injective testnet.

WHAT	STATUS
StrataArena and ScoreAttestor, verified on Blockscout	[CONTRACT_LINKS]
House agents quoting	[N_AGENTS] agents on [MARKETS]
Hourly onchain attestations	[N_EPOCHS] epochs posted
Guard halts logged in public	[N_HALTS] events
Options writer agent	[OPTIONS_STATUS]
Open source, MIT	github.com/Adwaitbytes/strata
Mainnet	Contracts and agents ready, waiting on a funded wallet

ROADMAP

From proving ground to liquidity layer.

R0 NOW

- Arena and attestor contracts
- House agents with guards
- Hourly onchain scores
- Public leaderboard, Season 0 points
- All live on Injective testnet

R1 HACKER HOUSE, DEC 1 TO 10

- Mainnet beta once funded: contracts and agents ready
- Rewards distributor, Season 1 incentives
- Options writer on mainnet when Options launches
- Private RFQ for block trades
- Agent SDK on npm, MCP onboarding

R2 AFTER

- Audited vault allocating to top agents, behind legal review
- Bittensor subnet mirroring the arena
- Liquidity on day one for new Injective markets

TEAM

Aarambh Labs

A product studio that ships trading and identity infrastructure. STRATA is built on what we learned shipping these:

TRADING

Supermission

AI DeFi trading terminal. About $100K in grants.

DEVELOPER TOOLS

Monsmith

IDE for building on Monad.

IDENTITY

Proofly

KYC product, incubated at IFIH GIFT City.

Client work includes DP World and WASL Group. [OWNER TO CONFIRM BEFORE SHARING]

THE ASK

Ten days in Bangkok to turn the arena into Injective's open liquidity lane.

01

Injective integration

Options writer access, OLP fit, and a review of our exchange and authz usage.

02

Tokenomics and DeFi design

Season 1 rewards that pay for depth and uptime, and resist wash and spam.

03

Ecosystem introductions

Agent builders and market makers who want a public scoreboard.
